

TRAVERTINA™ ARCHITECTURAL SERIES

 **AMCON**®

TRAVERTINA™ ARCHITECTURAL SERIES

Travertina™ Series units combine several different manufacturing techniques to produce a unique, multi-dimensional, burnished, recessed facial texture similar to natural travertine stone, but with the economy of a concrete masonry unit.

- Available in over 40 solid and variegated/blended colors, or work with our team to create your own signature color blend.
- Available in over 90 shapes and sizes including veneer and structural shapes, sills, and accent pieces.
- Manufactured using Amcon® EnviroTrol™ curing system to ensure completely hydrated, fully-cured, pre-shrunk units to reduce the potential for efflorescence.
- Also available using Amcon® Sustainable Solutions mix design for eco-friendly or LEED projects.
- Ask your sales representative about using Travertina for your next Allan Block Retaining Wall or AB Fence Project.
